

JCurve Solutions is looking for a Web Developer (Quicta) in Asia

Who is JCurve Solutions

Jcurve works collaboratively with ambitious organisations to drive growth through the effective use of technology. Serving as a trusted guide in an on-demand world, we help build growing and resilient organisations to withstand market disruption.

Role Summary

The purpose and responsibility of this role is to measure and optimise applications to improve ease of use, and create the best user experience by exploring many different approaches to solve end-users' problems.

The Web Developer is responsible for maintaining the current and future development efforts to meet the product. Our Quicta solution is built on the Google Cloud Platform (GCP) using Node.js. in the backend and Vue.js in the Front End.

As a part of the Quicta development team, you will need to work with the team in developing quality software, well documented, properly structured, testable and easily-comprehensible. You will undertake daily team updates and write software with the agile methodology of software development.

We are a product-focused team, driven by a desire to provide the users of our system with the best experience and support that we can. In addition to the development, delivery, and maintenance of our products, we provide second-tier technical support to colleagues and external partners as well as being available across the whole organisation to share our knowledge and experience.

Role Description

- Write well defined, testable and efficient code using the best software development practises;
- Understand REST API and integration with different third-party systems or build new integrations as per the product / project requirement;
- Create and maintain software documentation;
- Cooperate / Work with other developers /product specialists /consultants in gathering and refining product specifications based on technical needs;
- Stay abreast with the latest technologies/ industry trends which will enhance our software solutions;
- Write scalable software;
- Assist the support in second level support;
- Assist or take lead in resolving software bugs / issues;
- Maintain the agreed Service Level Agreement to ensure prompt and swift resolution of a support ticket
